CNL Environmental Remediation Management Update

Monica Steedman, VP, Environmental
Remediation Management

June 26, 2025

Low-Level Waste Management – Impact from NSDF Delays

CNL manages LLW in above ground storage and there is sufficient storage capacity to support CNL's plans over the next 10 years.

The delays to an operating NSDF impacts the overall ERM mission. The following mitigations are in place:

- ERM prioritizes the CRL site revitalization and defers large-scale environmental remediation.
- Inspection program to monitor waste container integrity and repackage as required.
- Increase throughput in CRL Sort and Segregation Facility (~100 m³ over the last 2 months)
- Enhance offsite waste processing (can achieve as much as 90:1 volume reduction).
